Batch: A1 Roll No.:16010120015

Experiment No.10

Grade: AA / AB / BB / BC / CC / CD / DD

Signature of the Staff In-charge with date

TITLE: IMPLEMENTATION OF SUM OF SUBSET ALGORITHM

OBJECTIVE

To learn the Backtracking strategy of problem solving for Sum of subset

CO TO BE ACHIEVED

CO 2 Describe various algorithm design strategies to solve different problems and analyse Complexity.

PRE LAB/ PRIOR CONCEPTS

Data structures, Concepts of algorithm analysis

HISTORICAL PROFILE

Subset sum problem is to find subset of elements that are selected from a given set whose sum adds up to a given number K.

We are considering the set contains non-negative values.

It is assumed that the input set is unique (no duplicates are presented).

One way to find subsets that sum to K is to consider all possible subsets.

A power set contains all those subsets generated from a given set.

The size of such a power set is 2^N .

Input:

A vector $X = \{x_1, x_2, \dots, x_n\}$ for all n elements in the set where $X_i = 0$ (element not added) or $x_i = 1$ (element added in the solution tuple).

Output:

K. J. Somaiya College of Engineering
(A Constituent College of Somaiya Vidyavihar University)

Summation of the chosen numbers must be equal to given number M and one number can be used only once.

BACKTRACKING CONDITION

$$B_k(x_1, \dots, x_k) = \text{true} \text{ iff } \sum_{i=1}^k w_i x_i + \sum_{i=k+1}^n w_i \geq m$$
$$\text{and } \sum_{i=1}^k w_i x_i + w_{k+1} \leq m$$

NEW CONCEPTS TO BE LEARNED

Application of algorithmic design strategy to any problem, Backtracking method of problem solving Vs other methods of problem solving problem sum of subset and its applications.

ALGORITHM

Algorithm sumOfSub(s, k, r)

{//It is assumed $w[1] \leq m$ and $\sum_{i=1}^m w[i] \geq m$

//generate the left child. Note: $s + w(k) \leq M$ since B_{k-1} is true.

$X[k]=1$;

K. J. Somaiya College of Engineering
(A Constituent College of Somaiya Vidyavihar University)

if $(S+W[k]=m)$ then write($X[1:k]$); //Subset found. there is no recursive call here
as $W[j]>0, 1 \leq j \leq n$.

else if $(S+W[k]+W[k+1] \leq m)$ then sumOfSub($S+W[k], k+1, r- W[k]$); //moving to
next sub-problem.

Similarly, assume the array is presorted and we found one subset. We can generate
next node excluding the present node only when inclusion of next
node satisfies the constraints.

if $((S+ r- W[k] \geq m)$ and $(S+ W[k+1] \leq m))$ then //generate right {
//child and those satisfying 2 bounding functions

$X[k]=0$;

```
sumOfSub (S, k+1, r- W[k]);  
}  
}
```

EXAMPLE SUM OF SUBSET PROBLEM ALONG WITH STATE SPACE TREE

Write and Explain Sum of Subset algorithm for

$n = 5$

$N = \{2, 7, 8, 9, 15\}$

$M = 17$

Solution:

Start space tree for the given problem

K. J. Somaiya College of Engineering
(A Constituent College of Somaiya Vidyavihar University)

The possible Solutions are

{ 2, 7, 8 }

{ 2, 15 }

{ 8, 9 }

CODE

```
import java.util.*;

class SubSet
{
    int set[];
    int sum;

    Stack<Integer> solutionSet;

    boolean hasSolution;

    SubSet(int set[], int sum){
        this.set = set;
        this.sum = sum;
        this.solutionSet = new Stack<>();
    }
}
```

K. J. Somaiya College of Engineering
(A Constituent College of Somaiya Vidyavihar University)

```
        hasSolution = false;
    }

    public void solve(int s, int idx)
    {

        if(s>sum)
            return;

        if(s==sum){
            hasSolution = true;

            displaySolutionSet();

            return;
        }

        for(int i=idx; i<set.length; i++)
        {

            solutionSet.push(set[i]);
            solve(s+set[i],i+1);

            solutionSet.pop();

        }

    }

    private void displaySolutionSet()
    {

        for (Integer item: solutionSet)
        {

            System.out.print(item+" ");
        }
    }
}
```

K. J. Somaiya College of Engineering
(A Constituent College of Somaiya Vidyavihar University)

```
    }

    System.out.println();
}

}

public class Main
{
    public static void main(String[] args) {

        Scanner s = new Scanner(System.in);

        System.out.print("Enter the number of elements in the set : ");
        int []set = new int[s.nextInt()];
        for(int i=0;i<set.length;i++){
            System.out.printf("Enter the value %d : ",(i+1));
            set[i]=s.nextInt();
        }

        System.out.print("\nYour set : ");
        for(int i=0;i<set.length;i++){
            System.out.printf("\t%d ",(set[i]));
        }

        System.out.print("\nEnter the Size : ");
        int size = s.nextInt();
        SubSet ss = new SubSet(set, size);
        ss.solve(0,0);

        if(ss.hasSolution == false)
            System.out.print("No Solution");
    }
}
```

OUTPUT

K. J. Somaiya College of Engineering
(A Constituent College of Somaiya Vidyavihar University)

```
Enter the number of elements in the set : 5
Enter the value 1 : 2
Enter the value 2 : 7
Enter the value 3 : 8
Enter the value 4 : 9
Enter the value 5 : 15

Your set :      2      7      8      9      15
Enter the Size : 17
2 7 8
2 15
8 9
```

```
Enter the number of elements in the set : 5
Enter the value 1 : 2
Enter the value 2 : 5
Enter the value 3 : 7
Enter the value 4 : 11
Enter the value 5 : 15

Your set :      2      5      7      11      15
Enter the Size : 21
No Solution
```

ANALYSIS OF BACKTRACKING SOLUTION FOR SUM OF SUBSET PROBLEM

K. J. Somaiya College of Engineering
(A Constituent College of Somaiya Vidyavihar University)

⇒ The Complexity of sum of subset problem. In state space tree the tree has 2^i nodes.

⇒ It gives n items, total number of nodes in tree could be $1+2+2^2+\dots+2^n$.

$$T(n) = 1+2+2^2+\dots+2^n = 2^{n+1}-1$$

$$\therefore T(n) = O(2^n)$$

Space Complexity = $O(1)$.

CONCLUSION

With the help of this experiment we were able to learn, understand and implement the following concepts:

- ✓ Implementation of sum of subset problem using Backtracking in JAVA Programming language
- ✓ Complexity Analysis of sum of subset problem.
